

ADVANCED CROW

The Advanced CROW from Tru-Mold Shoes combines the features of a custom molded boot and CROW AFO. The Advanced CROW enhances healing and off-loading of pressure to problem areas of the foot.

INDICATIONS:

- Charcot deterioration of the foot and/or ankle
- Charcot Joint
- Neuropathic ulcerations due to diabetes
- Metatarsal ulceration
- Osteochondritis Dissecans

FEATURES AT NO ADDITIONAL COST:

- Triple density custom molded Plastazote insert
- Plastazote lining
- Choice of heel-to-toe or forefoot rocker
- Choice of lace/speed-lace or Velcro D-ring closure

EXCLUSIVE PATENT PENDING FEATURES:

TM PRESSURE RELIEF SYSTEM – the Advanced CROW will be recessed on the insert and removable base material to reduce the plantar pressure on ulcerations, bone protrusions and other problem areas. If your patient requires additional pressure relief at these sites, simply remove the poron plug from the base material.

V FACTOR PLATE – this separate device is not lasted into the Advanced CROW at the time of manufacture. It is intended to provide auxiliary varus/valgus correction if your patient's condition changes at a later date.

To use the V Factor Plate, simply lift out the insert and removable base material, secure the V Factor Plate with double-

sided tape to the desired location on the bottom of the boot, and place the base material and insert back into the Advanced CROW.

Finally, if you require a custom molded shoe for the other foot to match the Advanced CROW, send us a cast or computer scan along with a regular Tru-Mold order form.
